

Energy consultancy services

Combustion Analysis

An on-site inspection of gas fired appliances including flue gas, gas flow and stack temperature can identify any problems. We can then provide recommendations for their effective, efficient and safe operation.

Natural Gas Conversions

AGL can convert any appliance with burners to natural gas.

Compressed Air & Steam Trap Survey

Finding and eliminating process leaks in steam or compressed air reticulation can result in significant energy savings.

Appliance Sizing

AGL can help you save energy by establishing the most appropriate size for your natural gas & electrical appliances.

Load Monitoring

You can determine your energy consumption by monitoring your site or individual appliances.

HVAC Studies & Lighting Surveys

You could cut costs by using the most appropriate appliances in the most cost-effective way.

Training

AGL can provide training for your staff in energy management and equipment operation.

Regulatory Submissions

In some circumstances, AGL can help with preparing regulatory submissions (eg. the Office of Gas Safety, EPA).
