

# Maria Androutsopoulos

Carbon & Renewables Trader

Maria Androutsopoulos is Carbon & Renewable Trader within AGL Energy's Carbon Solutions Team. In this role, Maria's responsibilities include managing AGL's environmental obligations, both in renewables & emissions. Specifically, Maria is charged with overseeing AGL's operation under the various state based energy efficiency schemes. This involves administering the operation of various renewable energy and energy efficiency initiatives and education of both internal and external customers.

Maria joined AGL in 2000, as a graduate Chemical Engineer, having completed a Bachelor of Engineering degree (with Honours) and a Bachelor of Commerce degree. Prior to this her industrial experience was in the manufacturing sector.

At AGL she has also had considerable experience in energy analysis. Maria has been involved with the technical and financial modelling of numerous build, own and operation projects for boiler, chiller and cogeneration systems, provided engineering support on customer projects and performed energy audits and emissions foot printing.
