Introduction

AGL is proposing to build the Gloucester Gas Project (GGP) which comprises several stages of development facilitating the extraction of coal seam gas (CSG) from the Gloucester Basin. Concept plan and project approval (Part 3A Approval) for the Stage 1 Gas Field Development Area (GFDA) was granted on 22 February 2011 under Part 3A of the Environmental Planning and Assessment Act (1979) (EP&A Act). In addition the project received approval under the Environment Protection and Biodiversity Conservation Act (1999) (EPBC Act) (EPBC Approval) on 11 February 2013.

The GGP will involve depressurising of deep groundwater and the extraction of gas from multiple coal seams within the Gloucester coal measures. Target coal seam depths will vary from site to site but are expected to range between 200 and 1,000 m below ground level (mbgl). The current GGP includes the construction, operation, and decommissioning of not more than 110 coal seam gas wells and associated infrastructure, including gas and water gathering lines within the Stage 1 GFDA. A comprehensive groundwater investigation (Phase 2 Groundwater Investigations) was completed in early 2012 to confirm the hydrogeological conceptual model across the Stage 1 GFDA (PB, 2012). Surface water and groundwater investigations are ongoing.

This Monitoring Report relates to the water monitoring activities specified in Part 5, Monitoring and Recording Conditions, of the Environment Protection Licence 20358. This report relates specifically to the monitoring surrounding the Waukivory Pilot Project, and details:

1. Final baseline monitoring results from a sampling event carried out before the Waukivory Pilot Project fracture stimulation commenced - 21 and 22 October; and
2. Monitoring results from a sampling event within 24 hours of the completion of the fracture stimulation of AGL gas well WK13, the first well to be fracture stimulated for the Waukivory Pilot Project - 6 November 2014.

As per the Licence, the monitoring encompasses the monitoring points at the locations as shown in Table 1 and Figure 1. The specific analytes and frequency tested are shown in Table 2. The monitoring results for this reporting period are shown in Table 3, Table 4 and Table 5.

The monitoring points that are the subject of this report are part of the GGP groundwater and surface water monitoring network, as described in AGL's Surface and Groundwater Management Plan (SGMP) for the Waukivory Pilot Project (AGL, 2014).

Three methods were used to obtain groundwater and surface water samples:

- A submersible pump at groundwater monitoring bores screened within relatively permeable geological materials, monitoring point 90 (12V pump) and monitoring point 91 (240V pump).
- A micro-purge™ low flow sampling pump at groundwater monitoring points 10, 11, and 12. The micro-purge™ system allows groundwater to be drawn into the pump intake directly from the screened portion of the aquifer, eliminating the need for excessive groundwater purging.
- A telescopic sampler to collect grab samples from the surface water monitoring points 7, 8, and 9.

EC and pH were monitored during purging to ensure that they had stabilised prior to sample collection. The water quality samples are analysed by an external NATA certified laboratory (ALS Environmental, Smithfield), in accordance with the EPA Approved Methods Publication "*Approved Methods for the Sampling and Analysis of Water Pollutants in New South Wales*" (EPA, 2004), with the exception of:

- Chloride (samples from 21 and 22 October 2014), which were analysed using the laboratory's updated method based on the current APHA 22nd Edition (2012) guideline. Samples from 6 November 2014 were also analysed (and results reported herein) using the EPA approved methodology which is based on the APHA 20th Edition (1998).
- Methane, which was analysed with a laboratory developed in-house technique which offers high resolution based on the "*Technical Guidance for Natural Attenuation Indicators: Methane, Ethane and Ethene*" (USEPA, 2002). The EPA have acknowledged that this method is a suitable technique for detecting dissolved methane in water (EPA, 2014).
- Nitrogen, which was analysed using an updated persulphate digestion method based on the "*Standard Methods for the Examination of Water and Wastewater: 22nd Edition*" (APHA, 2012). The EPA have acknowledged that this method is a suitable technique for analysing total nitrogen in water samples (EPA, 2014).

This report is prepared in accordance with the *Requirements for Publishing Pollution Monitoring Data* (EPA, 2012) (Publication Requirements).

The remaining water and land monitoring points in EPL 20358 will be reported in subsequent reports when the requirement for monitoring is triggered.

More information on the groundwater monitoring of the GGP is available on the project website: agl.com.au/Gloucester

Table 1: Waukivory Pilot Project water monitoring points (as per EPL 20358)

EPA Identification no.	Monitoring Point	Type of monitoring point	Easting (m)	Northing (m)
7	WKSW03	Stream gauge (surface water)	402486.36	6453090.65
8	WKSW02	Stream gauge (surface water)	402748.00	6452139.00
9	WKSW01	Stream gauge (surface water)	402069.00	6452241.00

Notes:

Special Frequency 3 – One sampling event before the Waukivory Pilot Project fracture stimulation commences, one sampling event within 24 hours of the completion of the fracture stimulation of each well, and one sample at week 2 and week 4 after the completion of the Waukivory Pilot Project fracture stimulation.

Special Frequency 4 – Every fortnight for 8 weeks from the commencement of the Waukivory pilot flow testing, then every 2 months thereafter until the cessation of the Waukivory pilot flow testing.

Special Frequency 5 – One sampling event within 24 hours of the completion of the fracture stimulation of each well, and one sampling event one week after the completion of the fracture stimulation of each well, and one sampling event every 6 months thereafter until the cessation of the Waukivory pilot flow testing.

Special Frequency 6 – One monitoring event to determine water level prior to the Waukivory Pilot

Special Frequency 8 – Every 6 hours

Special Frequency 9 – Every 6 hours when using an automated datalogger, or, once every fortnight using a Sonolog in the event of failure of an automated datalogger.

Shaded grey = not required to be analysed

- Shaded grey = not required to be reported
- na = not analysed
- ^a = THPS (Phosphonium, Tetrakis (Hydroxymethyl-sulfate)) was not able to be analysed by the date of this report pending development and validation of an approved method of analysis. Samples have been collected and stored in anticipation of the approved method.
- ^b = Methane units amended for Revision B of this report (issued 10 December 2014) from µg/L to mg/L to be consistent with the reporting units specified by the EPA in the EPL 20358.

Table 4: Water quality monitoring results for points 11, 12, 90, and 91 (final baseline sample (21 and 22 October 2014) and sample within 24 hours of completion of first fracture stimulation (WK13) (6 November 2014))

Notes:

- Shaded grey = not required to be reported
- na = not analysed
- ^a = THPS (Phosphonium, Tetrakis (Hydroxymethyl-sulfate)) was not able to be analysed by the date of this report pending development and validation of an approved method of analysis. Samples have been collected and stored in anticipation of the approved method.

Table 5: Continuous water level monitoring results for monitoring points 10, 11, 12, and 14 for the period 1 October – 30 November 2014

Monitoring point	10	11	12	14	
Location	WKMB01	WKMB02	WKMB03	PL03 Sensor 2	PL03 Sensor 3
Data type	Standing Water Level				
Units	mAHD (metres (Australian Height Datum))				
Data date range	01/10/2014 – 30/11/2014				
Date data downloaded	01/12/14	01/12/14	01/12/14	03/12/14	03/12/14
Date data supplied to AGL	03/12/14	03/12/14	03/12/14	03/12/14	03/12/14
Monitoring frequency required by licence	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours	Every 6 hours
No. of times measured during monitoring period	215	217	217	244	244
Min. value	89.5	95.2	90.5	86.5	49.0
Mean value	95.0	95.9	96.9	88.7	52.7
Median value	95.2	95.9	97.5	88.8	53.1
Max. value	95.3	96.1	98.3	89.8	55.6
