

The logo consists of the text "Energy in action.™" in a blue sans-serif font, positioned within a large, light brown rounded rectangle. Below this rectangle are three smaller, overlapping light brown rectangles of varying sizes and orientations, creating a stepped effect. At the bottom right of these shapes is the AGL logo, which features a blue square with a white sunburst icon and the letters "AGL" in white.

Introduction

AGL is proposing to build the Gloucester Gas Project (GGP) which comprises several stages of development facilitating the extraction of coal seam gas (CSG) from the Gloucester Basin. Concept plan and project approval (Part 3A Approval) for the Stage 1 Gas Field Development Area (GFDA) was granted on 22 February 2011 under Part 3A of the Environmental Planning and Assessment Act (1979) (EP&A Act). In addition the project received approval under the Environment Protection and Biodiversity Conservation Act (1999) (EPBC Act) (EPBC Approval) on 11 February 2013.

The GGP will involve depressurising of deep groundwater and the extraction of gas from multiple coal seams within the Gloucester coal measures. Target coal seam depths will vary from site to site but are expected to range between 200 and 1,000m below ground level (mbgl). The current GGP includes the construction, operation, and decommissioning of not more than 110 coal seam gas wells and associated infrastructure, including gas and water gathering lines within the Stage 1 GFDA.

Conditional approval was granted to AGL by the Division of Resources and Energy (DRE) in 2012 to implement a program (the Tiedman Irrigation Program) for produced water storage, blending, and irrigation activities on AGL's Tiedman property at Stratford in New South Wales (NSW). Approval was extended to 30 April 2015 by the Office of Coal Seam Gas (OCSG) on 4 July 2014. On 6 August 2014, the NSW Environment Protection Authority (EPA) issued Environment Protection Licence (EPL) 20358 that covers the CSG exploration, assessment and production activities in the GGP (EPA 2014).

The Tiedman Irrigation Program is divided into two areas, being Stage 1A and 1B (Figure 1):

- > Stage 1A is serviced by a lateral move irrigator which irrigates a maximum area of 18.2 ha, including 16 plots, two crop systems (annuals and perennials), and four soil treatment depths.
- > Stage 1B comprises an area of 8.6 ha (of which approximately 4ha is currently under irrigation), including four plots and a mix of annual and perennial pasture.

This Monitoring Report relates to the monitoring activities specified in Part 5, Monitoring and Recording Conditions, of Environment Protection Licence 20358 (the Licence). This report relates specifically to the monitoring surrounding the Tiedman Irrigation Program, and details:

1. Monitoring results from the 6-monthly soil sampling event at the Tiedman Irrigation Program (25 November 2014).

As per the Licence, the monitoring encompasses the monitoring points at the locations as shown in Table 1 and Figure 1.

The specific analytes and sample frequency are shown in Table 2. The monitoring results for this reporting period are shown in Table 3.

The monitoring points that are the subject of this report are part of the GGP soil monitoring network, as described in AGL's Soil Quality Monitoring and Management Program (FK, 2012). Soil monitoring results for the Irrigation program are presented in a baseline water monitoring report (FK, 2013a) and six-monthly compliance reports (FK, 2013b, 2014a and 2014b).

For monitoring points 53 – 68 (Stage 1A), samples were taken manually using a hand auger at 20 cm intervals down to the base of the respective treatment depth of 120 cm or until refusal on rock, and each depth interval from each soil sample location was be sampled and analysed.

For monitoring points 69 -81 (Stage 1B), samples were taken manually using a hand auger at 20 cm intervals down to the base of the respective treatment depth of 120 cm or until refusal on rock at 20 cm, and a lateral composite sample was formed from the different sample locations from the same depth profile located in the Stage 1B area and analysed.

The soil samples were analysed by East West Enviroag Pty Ltd, Tamworth, NSW, a National Association of Testing Authorities (NATA) and the Australasian Soil and Plant Analysis Council (ASPAC) accredited laboratory.

This report is prepared in accordance with the *Requirements for Publishing Pollution Monitoring Data* (EPA, 2012) (Publication Requirements).

Water monitoring data collected in November for the Tiedman Irrigation Program (monitoring points 27 – 52) were published in an earlier report (AGL, 2015) in accordance with the *Requirements for Publishing Pollution Monitoring Data* (EPA, 2012) (Publication Requirements).

The remaining water and land monitoring points in EPL 20358 will be reported in subsequent reports when the requirement for monitoring is triggered.

More information on the groundwater monitoring of the GGP is available on the project website: agl.com.au/Gloucester

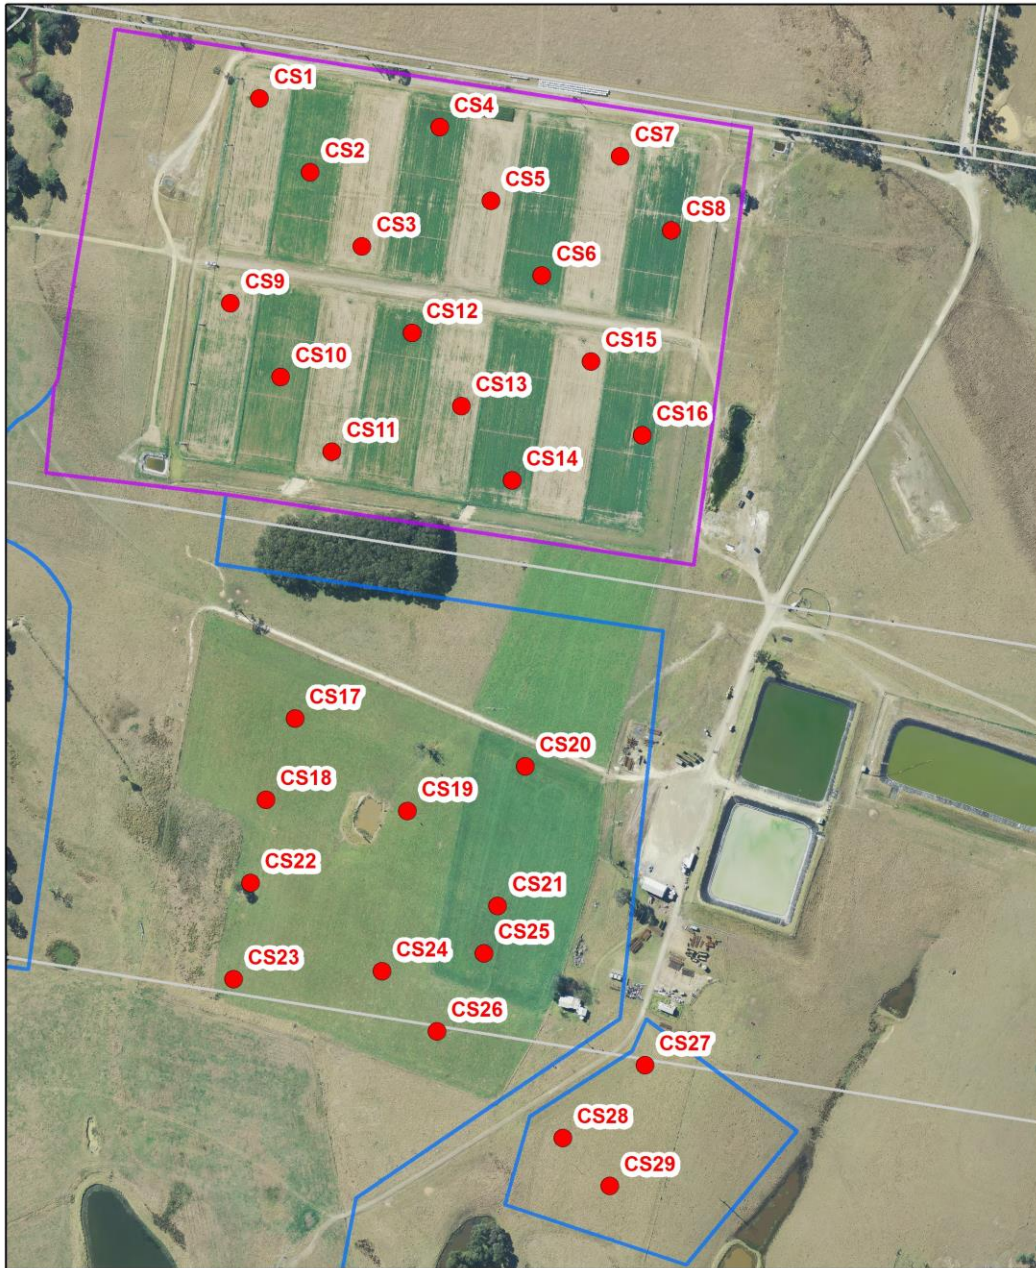

Table 1: Soil monitoring points, Irrigation Program (as per EPL 20358)

EPA ID no.	AGL ID	Location (Irrigation Area)	Type of monitoring point	Easting	Northing
53	CS1	Stage 1A	Soil quality	402197.4	6449446.6
54	CS2	Stage 1A	Soil quality	402238.8	6449386.7
55	CS3	Stage 1A	Soil quality	402280.6	6449326.7
56	CS4	Stage 1A	Soil quality	402343.7	6449423.3
57	CS5	Stage 1A	Soil quality	402385.2	6449363.4
58	CS6	Stage 1A	Soil quality	402426.6	6449302.9
59	CS7	Stage 1A	Soil quality	402490.2	6449399.8
60	CS8	Stage 1A	Soil quality	402531.7	6449339.6
61	CS9	Stage 1A	Soil quality	402173.9	6449280.2
62	CS10	Stage 1A	Soil quality	402214.8	6449220.5
63	CS11	Stage 1A	Soil quality	402256.4	6449160.1
64	CS12	Stage 1A	Soil quality	402321.4	6449256.5
65	CS13	Stage 1A	Soil quality	402361.5	6449197.0
66	CS14	Stage 1A	Soil quality	402402.4	6449136.6
67	CS15	Stage 1A	Soil quality	402466.6	6449233.2
68	CS16	Stage 1A	Soil quality	402508.1	6449173.2
69	CS17	Stage 1B	Soil quality	402226.4	6448943.4

pH	pH	Every 6 months	Special Method 2	Every 6 months	Special Method 6
Phosphorus	milligrams per kilogram	Every 6 months	Special Method 2	Every 6 months	Special Method 6
Potassium	milligrams per kilogram	Every 6 months	Special Method 2	Every 6 months	Special Method 6
Sodium	milligrams per kilogram	Every 6 months	Special Method 2	Every 6 months	Special Method 6
Soil texture	Visible	Every 6 months	In situ	Every 6 months	In situ
Sulfate	milligrams per kilogram	Every 6 months	Special Method 2	Every 6 months	Special Method 6
Zinc	milligrams per kilogram	Every 6 months	Special Method 2	Every 6 months	Special Method 6

Notes:

- › Special Method 2 – Samples will be taken at 20 cm intervals down to the base of the respective treatment depth of 120 cm (or until refusal on rock). For each of the four treatments, each depth interval from each soil sample location will be sampled and analysed.
- › Special Method 6 - Samples will be taken at 20 cm intervals down to the base of the respective treatment depth of 120 cm (or until refusal on rock). A lateral composite sample will be formed from the different sample locations from the same depth profile located in the Stage 1B area and analysed.
- › Depth increments (cm below ground):
 - › 0 – 20
 - › 20 – 40
 - › 40 – 60
 - › 60 – 80
 - › 80 – 100
 - › 100 – 120
