

Natural coal seam gas from NSW for NSW.

AGL is working side by side the Gloucester community to deliver gas from NSW for NSW.

Natural coal seam gas is energy. It's energy millions of Australian households and businesses use every day. From cooking meals, heating homes and water for baths and showers, to manufacturing products like bricks and glass.

NSW imports 95 percent of its gas from other states. And soon, we could face a supply shortage as some states start directing their gas to LNG export projects in Queensland. Prices could rise, and jobs may be lost.

NSW needs to determine its own energy future. And it's right here beneath our feet. It's natural coal seam gas – from NSW, for NSW.

AGL's Gloucester Gas Project could deliver more than 15 percent of NSW's gas needs by 2018.

Gas from NSW, for NSW – not exported offshore.

We're here to talk, so if you have any questions about the Gloucester Gas Project call Karyn Looby on 1300 886 170.
