Conclusion This bushfire safety study provides the proponent with

> information regarding the assessment of the classified bushfire prone vegetation within and surrounding the subject site and the minimum performance provisions that must be addressed to comply with Chapter 8 of PBP (2018) for 'other development'.

The study follows the guidelines provided by the Department of Planning NSW for hazardous industry.

This bushfire study confirms that the proposed development can achieve required bushfire mitigation actions: minimum

defendable space; access and water provisions; and emergency

management arrangements.
